Product Change Notification – EGPWS Terrain Databases

Date: November 23, 2020
Version: 618
Databases: MK VI, MK VIII, MK XXII, Worldwide and Regional Terrain Server Database
Effective Date: November 25, 2020

Dear Valued Customer,

Due to security enhancements, the EGPWS Terrain Databases will introduce a new digital signature file. The loadable images for the databases identified above will include a new crate.dsf file. References of new file listings for the affected databases are identified in the Change Information document published on the Aerospace Software & Data Services website at <https://ads.honeywell.com>.

The new digital signature file does not affect standard database loading procedures or processes for creating media using OneNav+ or OmniDrive. However, the latest version 2.8.0 is required to validate the databases.

Sincerely,

Terrain Database Team
