Date: 14 February 2024
Subject: ISS-2100 TAWS Database
Impacted: 787 TAWS operators
Databases: 638 and later

Dear Valued Customers,

For 787 aircraft using the Boeing Core Network System (CNS) for ISS-2100 database loading, the FILES.LUM and LOADS.LUM files will no longer be included in the database .zip file, as these files were required to be deleted prior to use of the Boeing LSAP Librarian Suite – Configuration Item Signer Crater Tool (CSCT).

Previous database delivery .zip file structure:

COL49-0005-1638.zip	
Name	**Type**
COL4900051638.LUH	LUH File
FILES.LUM	LUM File
HNR3T760.638	638 File
LOADS.LUM	LUM File

*The .LUM files are required for ground test equipment and aircraft using the Boeing Onboard Network System (ONS) for ISS-2100 database loading, which does not affect the 787 platform.

Database .zip file structure beginning with the 638 database release:

COL49-0005-1638.zip	
Name	**Type**
COL4900051638.LUH	LUH File
HNR3T760.638	638 File
