Integrated Navigation Data Service for Honeywell & BendixKing Avionics Systems

Charts and navigation information are highly perishable. But there’s an easy way to ensure your avionics are always current.

Honeywell and Jeppesen are pleased to offer the Integrated Navigation Data Service (INDS), which includes data for your moving map display, as well as Jeppesen approach charts and detailed enroute maps.

INDS offers a broad range of navigation information and coverage options to support worldwide flight operations, and with charts shown on large liquid crystal displays, the days of searching through binders of paper charts are over. Enroute navigation is intuitive and graphical with terrain, obstacles and navigation information at your fingertips from departure to destination.

And it’s from the worldwide leaders in cockpit systems and navigation information—Honeywell and Jeppesen.

With INDS you get one-stop-shop convenience for all your data and charts.

Updates to your Honeywell or BendixKing Avionics systems:

Loadable data

MFD charts—Issued every 14 days, contains electronic terminal charts per your INDS subscription. Worldwide coverage of geopolitical boundaries, airport information and obstacles is also included.

NavData for Epic INAV*—Issued every 28 days and contains worldwide airspace, communications and navigational data. Also contains the Enhanced Ground Proximity Warning Module.

NavData for APEX/AeroVue—Issued every 28 days and contains worldwide airspace, communications, and navigational data. Also contains city, roads and highway data.

Terrain database—Issued only as required and contains worldwide terrain data for aircraft with a Terrain Server.

Primus Elite (combination subscription)—We now offer NavData for the FMS and NavData/MFD charts all in the same subscription and delivery.

Non-loadable data

Supplemental EFB charts—Contains georeferenced terminal charts (approach, arrival, departure, airport and Class B airspace). Can be installed on PCs or accessed on tablets via the Jeppesen Mobile FliteDeck app. Coverage will match your MFD chart subscription.

Paper charts—Enroute, area and text included in paper form with your chart data service. Updates are issued as required.

Trip kits

If you’ve got a flight outside your normal chart coverage area, you can get a one-time Trip Kit for the specific region(s) you need. All it takes is a call or email and you’re on your way.

*Operators qualified to fly RNP procedures may subscribe to RNP AR navigation database.
